2. Commissions on clients' transactions are determined according to the following scale:

Table of commissions on clients' transactions for Stock Futures, based on the quarterly recalculation procedure⁵⁰

2001 - 4000	60%

5001 -	80%

It should be noted that the aforesaid percentage discounts are applied to the total number of contracts to which they correspond rather than on a tiered basis. More specifically, the commission is calculated by multiplying the number of contracts and the commission corresponding to the respective product, in accordance with the table of commissions on clients' transactions for Stock Futures, multiplied by the percentage discount corresponding to the respective interval.

1.1.4 Commissions on clients' transactions for Futures Contracts on the FTSE/ATHEX Large Cap Index⁵²

More specifically, the commission charges are calculated as the product of the number of contracts and the commission corresponding to the respective interval.

1.2 COMMISSIONS ON MARKET-MAKING TRANSACTIONS⁵³

1.2.1 Commissions on market-making transactions⁵⁴

1. Commissions on market-making transactions are the commissions charged for derivatives transactions carried out by Market Makers (in derivatives) in fulfilment of their market-making obligations with respect to listed derivatives (hereinafter "market-making transactions").

2. Commissions on market-making transactions are calculated in accordance with the stipulations of subparagraph 1.2.2.⁵⁵

4. For information purposes, "TABLE 1" also lists the commissions payable to ATHEXCSD in its capacity as central securities depository, with respect to deliveries of underlying securities upon expiration or exercise of options on derivatives.⁵⁶

1.2.2 Procedure for calculating commissions on market-making transactions⁵⁷

Commissions on market-making transactions are calculated for each Market Maker per calendar month, taking account of all market-making transactions performed by a Market Maker in the respective month. The calculation procedure is as follows:

Step (1): Initial Charge

The initial charge is calculated for market-making transactions carried out in the respective month. Initial charge shall mean the monetary amount calculated as the product of the total number of contracts in listed derivatives, which the Market Maker acquired as a result of its market-making transactions during the month in question, and the fixed charge per contract as stipulated in "TABLE 1" attached hereto. This charge is the aggregate of daily charges, as these arise for the Market Maker on the basis of its market-making transactions during the relevant month.

Specifically in the case of market-making transactions in Futures Contracts on the FTSE/ATHEX Large Cap Index, the following charges are applicable, depending on the number of contracts concluded by the Market Maker on a daily basis:

Number of Contracts/day	Commission (€)
1 - 250	0.25
251 - 300	0.20
301 - 1000	0.18
1001 - 2000	0.08
2001 -	0.05

It should be noted that the aforesaid commissions are applied to the total number of contracts to which they correspond rather than on a tiered basis. More specifically, the commission charges are calculated as the product of the number of contracts and the commission corresponding to the respective interval.⁵⁸

Step (2): Discounts based on monthly contract volume

1. A discount is applied to the monetary amount calculated in accordance with Step 1, based on the total monthly volume of contracts in listed derivatives, which the Market Maker acquired as a result of its market-making transactions during the respective month.
2. The percentage discounts on the initial charge are tiered according to each listed derivative as per the following table:

Table of discounts per level of total monthly volume⁵⁹

Options on FTSE/ATHEX-Large Cap Index				
Volume of Options on FTSE/ATHEX-Large Cap Index	4,000–8,000	8,001 – 15,000	15,001- 20,000	>20,000
Percentage Discount for the respective volume	25%	50%	75%	100%
Stock Futures				
Volume of Stock Futures	2,000–5,000	5,001 – 10,000	10,001- 20,000	>20,000
Percentage Discount for the respective volume	25%	50%	75%	100%
Stock Options				

Volume of Stock Options	2,000–4,000	4,001 – 8,000	8,001- 15,000	>15,000
Percentage Discount for the respective volume	25%	50%	75%	100%

The percentage discounts for Stock Futures shall apply only when the initial charge ceases to be zero.

Step (3): Discounts on account of concurrent Market Making in Futures and Options having the same underlying asset.⁶⁰

1. These discounts apply to market-making transactions of a Market Maker when the relevant transactions relate to Futures and Options with the same underlying asset.

2. The percentage discounts for each underlying asset are listed in the following table:

Table of additional discounts for Market Makers in Futures and Options with the same underlying asset⁶¹

Underlying Asset	Futures	Options	Both
FTSE-ATHEX - Large Cap	0%	0%	5%
National Bank	0%	0%	5%
Alpha Bank	0%	0%	5%
OPAP	0%	0%	5%
PPC	0%	0%	5%
OTE	0%	0%	5%
Piraeus Bank	0%	0%	5%

3. The above percentages are aggregated on the basis of the total number of above-mentioned underlying assets for which the Market Maker has simultaneously assumed market-making obligations in Futures and Options, resulting in the total percentage discount.

4. The total percentage discount to which a Member is entitled can under no circumstances exceed fifty percent (50%).

5. The total percentage discount is applied per calendar month to the monetary amount calculated in accordance with Step 2, in respect of each separate futures contract and option with the same underlying asset for which the Member has undertaken market-making obligations.

Step (4): Alert fees⁶²

Fees for alerts, as activated in accordance with the admission characteristics of the respective derivatives, are calculated for each Market Maker per calendar month, taking account of all alerts activated for a Market Maker during the month in question. Alert fees are applied to each listed derivative on the basis of the total monthly number of market-making alerts. More specifically, alert fees for each listed derivative are calculated

as the product of the total monthly number of alerts and the value that corresponds to the respective interval, as per the following table:

Table of alert fees

Futures on FTSE/ATHEX–Large Cap Index			Options on FTSE/ATHEX–Large Cap Index		
From	To	Fee per alert	From	To	Fee per alert

The monetary amount calculated as above is added to the monetary amount resulting from the calculation performed in accordance with Step 3.

2. Commissions for Cancellations of Derivatives Transactions on ATHEX⁶³
