

PRESS RELEASE

Watera Hellas present at the Best City Awards 2023

The Municipalities of Mykonos and Orestiada were honored with Gold and Silver awards in the context of this year's Best City Awards for the desalination units produced by Watera Hellas that they have installed. The award ceremony took place on Monday, January 16, 2023 at the amphitheater "Miltiadis Evert" of the Municipality of Athens.

The Municipality of Mykonos received the gold award. Mykonos has over the years utilized the technology of seawater desalination to meet the ever-increasing needs of the island for drinking water. The award was received by the Mayor Mr. Konstantinos Koukas. It is noted that the desalination units of Watera Hellas owned by the Municipality of Mykonos have a total nominal capacity of 11,000 cubic meters per day and cover a significant percentage of the total demand during the summer months.

Similarly, the Municipality of Orestiada was rewarded with the Silver Award for one of the largest water treatment projects that has been carried out in the country. The award was received by the Mayor Mr. Vassilios Mavridis. In particular, within the framework of this contract, high quality of drinking water is delivered in 19 villages and settlements of the Municipality of Orestiada, solving problems arising from high concentrations of pollutants such as manganese, iron, arsenic and nitrates. The supply of all water treatment systems, which included 14 desalination systems, with a total capacity of 15,300 cubic meters per day, was undertaken by Watera Hellas.

Watera is always ready to provide assistance in any effort to upgrade the basic infrastructure of the country's Municipalities in order to improve the living conditions of both permanent residents and visitors by ensuring a sufficient quantity and excellent quality of drinking water.

January 23, 2023

WATERA Hellas S.A. is a subsidiary of Unibios Holdings S.A., and a leading company in the field of water treatment and recycling in Greece. It was founded in 1963 and is the first in terms of installed capacity of desalination and fast refineries in Greece.
