Hellenic Cables to supply inter-array cables for New Jersey Offshore Wind Project

Cenergy Holdings announces that Hellenic Cables, its cables segment, signed a partnership agreement with Leading Light Wind, one of the largest offshore wind projects in the U.S., located over 40 miles off the coast of the New Jersey. Hellenic Cables will supply 65km of 132kV inter-array cables, a part of the project's total inter-array cable needs. Leading Light Wind is developed by lead developer Invenergy and co-developer energyRe.

Leading Light Wind, the only American-led project in the New York Bight lease area, will be able to generate 2,400MW of clean, reliable energy, enough to power up to 1 million homes annually while offsetting 4 million tons of CO₂ emissions each year once operational. The delivery of the inter-array cables is planned for 2030, with the production of certain cable components starting immediately at Hellenic Cables' state-of-the-art facility in Corinth, Greece. This award highlights Hellenic Cables' industry leadership in delivering innovative, high-performance solutions tailored to the evolving needs of the renewable energy sector.

Alexis Alexiou, CEO at Cenergy Holdings, said: *"We are honoured to collaborate with Leading Light Wind on this landmark project, which strengthens the U.S. offshore wind supply chain. Our contribution to the Leading Light Wind project underscores Hellenic Cables' commitment to providing pioneering solutions that support the energy transition and enhance sustainability on a global scale."*

Wes Jacobs, Leading Light Wind Project Director, added: *"Leading Light Wind is thrilled to partner with Hellenic Cables to leverage this cutting-edge cable technology. This partnership marks an exciting milestone for Leading Light Wind and will enable innovation and efficiency in our project design."*

About Leading Light Wind

Leading Light Wind is an American-led offshore wind project that can deliver 2,400 MW of clean, locally sourced energy to New Jersey – enough to power more than one million Garden State homes. Located over 40 miles off the New Jersey coast, Leading Light Wind is positioned to spur \$3.7 billion in economic development benefits, create thousands of local union jobs, and empower local communities and partners across the state through an \$150 million community benefits program. Leading Light Wind, one of the largest offshore wind projects in the U.S., is being developed by two American companies: lead developer Invenergy and co-developer energyRe—partners with a proven track record of responsible development.
